EXPERIENCE

Money Honey Financial Pvt. Ltd.

June 2021 - Present

Software Engineer

Mumbai

- Created a Mutual Fund Platform linked with NSE India to handle all types of investments including Lump Sum, SIP, SWP, STP, Switch, and Redemption. Built systems to manage transactions, handle errors, and show real-time updates in a user dashboard.
- Developed a microservices-based financial platform using .NET Core and Angular, with modular services like Investor API, Core API, Mutual Fund API, BA API, and Orders. Used an API Gateway to keep services connected and scalable.
- Built a WhatsApp Cloud API Chat System for financial advisors to talk directly with clients in real-time. Integrated Meta's Webhook for instant alerts, added secure file sharing, and set up access control based on user roles.
- Worked on web applications and APIs using Angular and .NET Core, focusing on performance, usability, and clean code.
- Designed and supported systems like the Document Management System (DMS) and Daily Transaction Report (DTR) using ASP.NET.
- Portfolio Dashboard: Display total portfolio value, asset allocation, and historical performance.
- Transaction Report Dashboard: Show transaction details, type breakdown, date-wise transactions, capital gains, and transaction fees.
- CGL (Capital Gain Loss) Report: Provide account summary, detailed ledger entries, account-wise transactions, reconciliation status, and visual graphs.
- Preprinted Form Master: Offer form templates, data integration, form customization, download/print options, and form validation.
- Created a console application with a scheduler to sync data across services daily without manual effort.
- Collaborated closely with teams to turn business needs into working software with practical solutions.
- Used Git for version control and team collaboration, ensuring smooth and organized development.
- Handled junior developers by reviewing their code, mentoring them, assigning small tasks and bugs, reviewing the code, and deploying up to UAT.

AREAS OF EXPERTISE

- Front-end & back-end web development, code structure & architecture, Angular, Azure Cloud Integration, Dependency Injection in .NET Core, Middleware in ASP.NET Core, Git, Agile software development, backend technologies (ASP.NET, .NET Core, SQL Server, Dapper), developing RESTful APIs with .NET Core, ASP.NET Core Authentication and Authorization.
